

Sustainable Transportation Issues

In order to achieve a comprehensive and balanced analysis, the indicator sets need to include indicators from each of the categories of issues, namely economic, social and environment. The table below lists some examples of impacts that need to be captured by a sustainable transport indicator set.

Economic	Social	Environmental
Accessibility quality Traffic congestion Infrastructure costs Consumer costs Mobility barriers Accident damages Depletion of Non-Renewable Resources	Equity / fairness Impacts on mobility disadvantaged Affordability Human health impacts Community cohesion Community liveability aesthetics	Air pollution Climate change Noise pollution Water pollution Hydrologic impacts Habitat and ecological degradation Depletion of Non-Renewable Resources
